

Starting at 0 we can count up in units like this:

0 1 2 3 4 5 6 7 ...

But what happens before zero?

We have the negative numbers, like this:

-7 -6 -5 -4 -3 -2 -1 0

If we count **up**, we move from the **left to the right** and the numbers **increase**.

So, -7 to -6 is moving from the left to the right and the numbers have increased because -6 is bigger than -7.

If we count **back**, we move from the **right to the left** and the numbers **decrease**.

So, -3 to -4 is moving from the right to the left and the numbers have decreased because -4 is smaller than -3.

Here is part of a number line going from 7 down to -7:

-7 -6 -5 -4 -3 -2 -1 0 1 2 3 4 5 6 7

### Example

Count back to work out the missing number.

-4 -3  -1 0 1 2 3

What is the missing number?

### Answer

Counting back from 0 means the numbers decrease.

-3 -2 -1 0

So the missing number is **-2**.

Does that make sense?
