

When we add 1,000 to a four-digit number, we must increase the digit in the thousands column by 1.

Here is the number 1,623 shown on an abacus.

**Notice that the abacus says units. Units are another word for ones.**

When we add 1,000, we add an extra number to the thousands column.

$$1,623 + 1,000 = 2,623$$

**Example**

Add 1,000 to:

5,028

**Answer**

We increase the 5 in the thousands column by 1 to get 6 in that column.

$$5,028 + 1,000 = 6,028$$

It's that simple! Let's try some questions now.
