

In this activity, we will be working out the perimeter of a regular 2D polygon.

The perimeter is the total distance around the outside of a 2D shape. We can calculate the perimeter by adding together the length of all the sides.

Remember that in a **regular** polygon, all the sides are the same length.

**Example**

Calculate the perimeter of the shape.

**Answer**

First, count the number of sides.  
There are **5** sides in this shape. It is a pentagon.

It is regular so each side is 3 cm long.  
The perimeter is  $5 \times 3 = \mathbf{15 \text{ cm}}$

**Remember the answer is 15 cm not just 15!**

Let's try some questions now!
